# Bar|Scan® IT Integration

Looking for a better barcode tool for your IT asset inventory?

Make sure that your IT physical inventory is accurate before updating your repository.

• Bar|Scan® has extensive inventory validation built-in. Never worry about a duplicated serial or asset number again.
• Bar|Scan has an easy to use Report Generator for physical audits.

We support many Microsoft® Windows Mobile™ or Windows® CE barcode capable handhelds, not just one or two.

• Choose the right hardware for your unique environment, not just one vendor's offering.
• Bar|Scan supports USB, email and Wi-Fi synchronization of data.

Bar|Scan adds total flexibility to data collection with your handheld.

• Bar|Scan can download your entire inventory into the handheld for accurate validation.
• Easy to use configuration tool for device prompting.
• Change the device prompting at any time, no obsolescence.
• Choose which data elements to download into the device.
• Build and keep multiple configurations for different IT functions, e.g. receiving, risk management audit, hard drive destruction, asset disposal.

Bar|Scan is easy to integrate with your asset repository.

• Supports ODBC, CSV, XML, Excel, Word, PDF and other file interface formats.
• Menu driven import and export generation, no programming required.
• Use XML scripting to launch your import and export instructions on a timed bases.

Bar|Scan can adjust to your changing needs.

• Add, change and delete fields as your requirements change.
• Modify your imports and export instructions quickly to meet new requirements.

Bar|Scan is an easy to implement, cost effective solution.

• Bar|Scan is self contained, fully documented system ready to use in minutes on a laptop or server.
• Need manpower for an IT inventory? Our experienced staff can handle the job.
